OPIS

1, 2, 3, expandable filter stages.

Undo the screws, remove the back, and insert another filter tray. It's that simple. No costly cassettes to buy. No time wasted changing back plates.

Revolutionary filter stages.

As well as being removable, the 2nd and 3rd stages rotate through 360 degrees. And of course, you can rotate a round filter in our donuts.

It's better to be compact.

Beyond being a studio matte box, Viv is flexible enough to transform in to a lightweight clamp-on. Light enough to take to any location, and small enough to manoeuvre in any space.

Swing away to clamp-on in seconds.

With the addition of the lightweight arm, Viv becomes a fully functioning studio matte box. Once attached the arm can be removed in seconds. Simply release the lock, slide the matte box off the arm, and you're ready to go in clamp on mode.

Faster lens changes.

Viv is able to slide forward and swing away in an effortless motion to make lens changes quick and simple, giving you more time to focus on what's important.

Superior light control.

Our matte boxes aren't just filter holders. Protecting your lens from stray light improves contrast and resolution. The carbon fibre blades are fixed to light alloy axles that stay with the flag. Remove the flag, remove the weight.

A step up in strength.

Viv is engineered to achieve an incredibly high strength to weight ratio. Combining a rock solid carbon fibre core with sophisticated hard anodised alloys, Viv is extremely tough and built to last.

We stand by our products, and on them.

A mounting point with a difference.

A feather light floating hole. The 3/8" mounting point means you can attach a small LED light, a monitor or best of all, a Cinetape for tracking distance. Simply twist, slide and place it wherever you want, or remove it in seconds.

It just got easy.

Normal filter stages get clogged up. Thanks to our Stack Cassette Technology, trapped debris

and lubrication are now a thing of the past.

Servicing only takes a few minutes. You're done with just the swipe of a brush.
