EVENTIDE ELEVATE BUNDLE

Elevate is the most advanced mastering plug-in ever created. This unique multi-band limiter, human-ear EQ and powerful audio maximizer will increase the loudness of your mix while maintaining or improving its dynamic perception. It uses intelligent, adaptive technology that responds in real time to your music; creating not only the loudest, but the best sounding master.

MASTERING BUNDLE

Mastering with a Brain

Elevate is the most advanced mastering plug-in ever created. This unique multi-band limiter, human-ear EQ and powerful audio maximizer will increase the loudness of your mix while maintaining or improving its dynamic perception. It uses intelligent, adaptive technology that responds in real time to your music; creating not only the loudest, but the best sounding master.

Saturate

Saturate is the Spectral Clipper algorithm made popular in the Elevate Mastering Limiter. Saturate's two controls belie a sophisticated signal processing engine which allows it to overdrive a signal without effecting the tonal balance no matter how hard you push it. Add up to 12 dB of clipping with a variable shape parameter which moves from a pleasant soft curve to full hard clipping. Additionally, the SHAPE control allows you to smoothly morph between hard clipping and the mathematically smoothest curve possible. Use Saturate to overdrive individual tracks or your entire mix.

Punctuate

Based on the Transient Emphasis section of the award winning Elevate Mastering Limiter, Punctuate is a multi-band transient modulator based on the critical bands in the human ear. Punctuate's intelligent algorithms allow you to control the transient emphasis or suppression of all 26 critical bands with just 4 controls. This makes for an incredibly powerful, but very easy to use transient modulator.
