OPIS

The Pozi-Loc cam-operated clamping system requires low effort with a 90° turn from on to off, providing the user with a positive indication that the tripod is securely locked. The profile of the knob ensures that camera cables cannot snag.

The 'Baby Legs' tripod is a low-level version, with a minimum height of 28 cm (11 in.) which makes even lower shots possible.

- Pozi-Loc clamps
- Mid-level spreader available

Also available as part of a systems package
