OPIS

Many design features that have been requested by our customers have been included in this machine.

- New shield separates the “dirty” film from the “clean” section
- Magnetic particle brake provides tension
- A switch on tightwind prevents machine from running if tightwind is not employed
- New metal tank cover goes on without removing any rollers
- Acceleration and deceleration ramps make the transportation smoother
- More precise cut switch on tension arm
- Hour meter and air pressure gauges on front
- Multiple languages available
