OPIS

VSNmulticom is a highly reliable product that meets automation's highest requirements:

- Control of videoservers and broadcast equipment (validated by manufacturers)
- A/B Performance control
- TV/DTV/HDTV playout
- Video Ingests and content transfers
- Integration with Archive, MAM and Scheduling systems

The automation software includes a sophisticated tool to manage secondary and auxiliary

events, yet proving easy to learn and operate by all MCR operators.

VSNmulticom also features some optional modules that:

- request an automatic copy of the contents to the videoservers (to MAM and/or archive modules)
- create an ingest reclist
- transcode the AV contents to the desired format
- provide reporting tools about the status of all controlled devides
- manage the central-local connection-disconnection processes
- command other subsystems, such as web services, subtitling, encoding-transcoding, effects, etc.

One of the most competitive advantages of vsnmulticom lies in its independence of all the equipment installed in the broadcast infrastructure as it has been approved by manufacturers like EVS®, GrassValley®, Sony®, Avid®, Brainstorm®, Chyron®, Seachange®, Omneon®, VizRT® and Pesa® ,among others.
